

CONTACT TRACING

Volan Positioning System™

Click the video to learn more.

Innovative solutions for Covid-19 and safety in the hospitality industry.

1

When a confirmed virus case is reported, Volan can run a precise **trace across thousands of people in seconds**, and rank those most exposed based on a patented scoring system using CDC guidelines.

2

Don't wait days or weeks for public health departments to do manual tracing based on people's memories. Volan enables operators to avoid quarantining large groups of staff who work the same shift and **saves millions of dollars** in manual labor.

3

Volan has **zero dependency on cellular, GPS, WiFi, and even electrical power**. Volan does not collect personal information and anonymous data is securely stored with AES-256 encryption (used by the NSA).
